INTERNET SECURITY
SPHERE

BASIC FEATURES

- Permanent antivirus shield
- Email protection
- Web protection
- Intelligent firewall
- Creation of an USB scanner
- Creation of a recovery boot disk

File system protection

The basic layer of protection is represented by on-access and on-demand scanning of files and folders. A highly effective double engine set is used for scanning.

Reactive and proactive

Both signature scanning and behavioral analysis are at work. A traditional scanner with an continuously updated virus database detects and stops most threats. Heuristic analysis takes care of the rest.

Additional layers

In addition to the standard antivirus and antispyware protection, email and web traffic are also monitored. The aim is to stop viruses before they end up on the hard drive. An intelligent firewall is sifting incoming and outgoing connections and blocking potential threats

AUTOMATED UPDATES AND UPGRADES

The virus database gets automatically updated in specified intervals, staying ready for new incoming threats. With each new version of the software, an automated upgrade is also available.

EMAIL ANTIVIRUS AND ANTISPAM

Vast portions of email traffic are occupied by spam. That is why it is so important to have an effective antispam. Occasionally, emails are also abused for virus propagation. That is what we have email antivirus for.

INTELLIGENT FIREWALL

By calling our firewall intelligent means that it will not ask you about each new application. In most cases, it will accurately evaluate security of the app, and stop it automatically, if necessary.

PARENTAL LOCK

A web filtering module provides a protected environment for children and teenagers online. It enables blocking of predefined content categories. Any changes to parental lock are possible after entering a password.

MOBILE ANTIVIRUS

The software provides you with a practical way of protecting your flash drives and other removable media. You can install a mobile version of the antivirus on your storage medium; it will stay protected, no matter which computer you use.

RECOVERY DISK

There are two methods available for the creation of an antivirus boot disk:,
- A plugin for Bart's Preinstalled Environment
- Windows Preinstallation Environment

REMOTELY MANAGED

The software is fully compatible with TrustPort Management, enabling its remote installation, configuration, and maintenance on multiple computers in a network.
